Sequence 96, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION.
APPLICANT: Griffals, R.
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: Thereof and uses thereof, in particular for the diagnosis, preve
TITLE OF INVENTION: and treatment of infection
FILE REFERENCE: 9710-003-99
CURRENT APPLICATION NUMBER: US/09/198,452A
CURRENT FILING DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Sequence 68 Application US/08117083

Patent No. 5719654

GENERAL INFORMATION:

APPLICANT: Boursmell, Michael E.

APPLICANT: Inglis, Stephen C.

APPLICANT: Munro, Alan J.

TITLE OF INVENTION: Recombinant Virus Vectors Encoding Human TITLE OF INVENTION: Papilloma Virus Proteins

NUMBER OF SEQUENCES: 70

CORRESPONDENCE ADDRESS:

ADDRESSER: Walter H. Dreger

STREET: 4 Embarcadero Center, Suite 3400

CITY: San Francisco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: MARC J. Rubenfield et al.
APPLICANT: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINGSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINGSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINGSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT FILING DATE: 1999-02-18
PRIOR PELING DATE: 1998-02-18
PRIOR PELING DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
  TITLE OF INVENTION: INTRACYTOPLASMIC DOMAIN FOR ACHIEVING PROTEIN SECRETION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ..

Patent No. 568628
GENERAL INFORMATION
APPLICANT: MacDonald, Marcy E.
APPLICANT: Ambrose, Christine M.
APPLICANT: Duyao, Mabel P.
APPLICANT: Gusella, James F.
TITLE OF INVENTION: Huntingtin DNA, Protein And Uses Thereof
NUMBER OF SEQUENCES: 25
CORRESPONDENCE ADDRESS:
ADDRESSEE: Sterne, Kessler, Goldstein & Fox
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match 67.4%; Score 31; DB 4; Length 778; Best Local Similarity 66.7%; Pred. Patent No. 6235872
GENERAL INFORMATION:
Bredesen, Dale E.
APPLICANT: Rabizadeh, Sharroz
TITLE OF INVENTION: Proapoptotic Peptides, Dependence
TITLE OF INVENTION: Polypeptides and Methods of Use
NUMBER OF SEQUENCES: 72
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell & Flores LLP
STREET: 4370 La Jolla Village Drive, Suite 700
APPLICANT: Lanahan, Anthony
APPLICANT: Worley, Paul
APPLICANT: Worley, Paul
APPLICANT: Snyder, Solomon
TITLE OF INVENTION: Huntingtin-associated protein
FILE REFERENCE: 01107.52271
CURRENT APPLICATION NUMBER: US/08/556,419C
CURRENT APPLICATION NUMBER: US/08/556,419C
CURRENT APPLICATION NUMBER: 1995-11-09
NUMBER OF SEQ ID NOS: 25
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 21
LENGTH: 3144
TYPE: PRT
TYPE: PRT
TYPE: PRT
USGARNISM: Home sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A_Geneseq 19Jun03:*

                                                                                                                                                                                                                                         ö
                                      The present sequence is the N-terminus of the ribosomal protein L7/L12 from the L2 strain of Chlamydia trachomatis. Immunoblot analysis showed that the protein is immunogenic in humans as a consequence of chlamydial infection. A number of Chlamydia trachomatis immunogens were identified by this method. The immunogenic proteins may be used in the manufacture of medicaments for the treatment and prevention of chlamydial infection. Antibodies against the proteins and nucleic acids encoding the proteins may be used in the diagnosis of infection. The Chlamydia are responsible for endemic sexually transmitted infections, trachoma, infectious pneumonitis, and various other disease syndromes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a ribosomal protein, designated L7/L12 protein. The specification describes an antibody that reacts specifically with the ribosomal protein of Chlamydia pneumoniae, particularly L7/L12 protein. The antibody is used for the detection of Chlamydia pneumoniae, which is applicable in diagnosis of (non-stereotypic) pneumonia by assaying the causative microbe e.g. in body fluids like blood and tissue samples, particularly useful in pharmaceutical industry and clinical medicine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Detection of Chlamydia pneumoniae by using antibody against ribosomal protein, applicable in diagnosis of (non-stereotypic) pneumonia by assaying the causative microbe e.g. in body fluids like blood and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an antibody reacting specifically against the ribosomal protein of Chlamydia trachomatis. The method of the invention can be used for detecting a specific microbe preferably Chlamydia trachomatis. The current sequence represents the ribosomal protein L7/L12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antibody against ribosomal protein of Chlamydia trachomatis, useful for detection of Chlamydia trachomatis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The configuration of many production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in changing identification of mutations in companies. For general expression or phelications in changes and sesses biodiversity responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Drosophila; developmental biology; cell signalling; insecticide;
New isolated polynucleotide and encoded polypeptides, useful in
                    diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent citiis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                               AAV34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and

  ö
                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                (ABBS7737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                             Gaps

                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation.

AAF68082 and AAF68082 represent sequencing primers which are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Corynebacterium glutamicum nucleic acids encoding membrane construction and membrane transport proteins or their portions, useful for typing or identifying C. glutamicum or related bacteria, and as markers for transformation -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These
                                                                                                AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation.

AAF68082 and AAF68082 represent sequencing primers which are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                    Corynebacterium glutamicum nucleic acids encoding membrane construction and membrane transport proteins or their portions, useful for typing or identifying C. glutamicum or related bacteria, and as markers for transformation -

Included in the invention is a vector containing the CMRP cDNA, and a host cell transformed with the vector. The host cell (a microorganism, Corynebacterium or Brevibacterium, moss or algae or a plant cell) is useful for producing a fine chemical such as carbohydrates, cofactors and/or enzymes. The nucleic acid molecules are suitable for modifying a carbohydrate production system in a host, e.g., microorganisms and plants. They are also useful to identify those DNA sequences and enzymes in other species which are useful to modify the biosynthesis of starch, cell wall polysaccharides and sugars. The nucleic acid molecules may be
are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lyaine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel moss nucleic acid molecules encoding a carbohydrate metabolism related protein useful for modulating production of fine chemicals such as carbohydrates, cofactors and enzymes from microorganisms and plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               carbohydrate metabolism related protein; CMRP; sugar; cofactor;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to nucleic acid molecules AAH88708 - AAH88706 isolated from Physocomitrella patens (a moss), which encode carbohydrate metabolism related proteins (CMRP) represented in AAM00012 - AAM00110.

Included in the invention is a vector containing the CMRP cDNA, and a host cell transformed with the vector. The host cell (a microorganism, corynebacterium or Brevibacterium, moss or algae or a plant cell) is useful for producing a fine chemical such as carbohydrates, cofactors and/or enzymes. The nucleic acid molecules are suitable for modifying a carbohydrate production system in a host, e.g., microorganisms and plants. They are also useful to identify those DNA sequences and enzymes in other species which are useful to modify the biosynthesis of starch, cell wall polygaccharides and sugars. The nucleic acid molecules may be utilised in the genetic engineering of Corynebacterium glucamicum and the related Brevibacterium species and Acetobacter xlinum and chorellated.
                                                                                                                                                         ö
utilised in the genetic engineering of Corynebacterium glutamicum and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              related protein useful for modulating production of fine chemicals such as carbohydrates, cofactors and enzymes from microorganisms and plants
          related Brevibacteium species and Acetobacter xylinum and Chlorella to make it a better or more efficient producer of one or more fine chemicals. Mutagenesis of one or more CMRPs may also result in CMRPs having altered activities which indirectly impact the production of one or more desired fine chemicals from plants. Primers AAH88705 - AAH80707 are used in the sequencing of the CMRP CDNA sequences of the invention.
                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                    Moss; carbohydrate metabolism related protein; CMRP; sugar; cofactor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                make it a better or more efficient producer of one or more fine chemicals. Mutagenesis of one or more CMRPs may also result in CMRPs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel moss nucleic acid molecules encoding a carbohydrate metabolism

```
The invention relates to polynucleotides and polypeptides of the lumazine synthase (beta -subunit) family, designated ribH. They are isolated from Staphylococcus aureus. ribH enzymes are involved in the synthesis of ribOflavin. The polynucleotides and polypeptides may be employed as research reagents and material for the discovery of treatments and dagnostics for diseases, particularly human diseases. They can be used for diseases, and ideases, and seases, and seases, and as reagents in differential screening methods. The polynucleotides may be used as a cource for hybridization probes, and for chromosome identification. The polypeptides can be used to produce antibodies. The polypeptides can calso be used in vaccine formulations, and to identification. The calso be used in vaccine formulations, and to identify agonists and cantagonists. These are used to prevent, inhibit or treat diseases, particularly of Helicobacter pylori infections, such as gastroincestinal carcinoma. Gastric ulcers and gastritis may also be treated. The polypeptides can also be used to treat wounds and in-dwelling devices to prevent bacterial adhesion and infection, and to block ribH protein.
                                                                                                                                          Lumazine synthase, ribH; riboflavin; differential screening; gastritis; H. pylori infection; gastrointestinal carcinoma; gastric ulcer; wound; bacterial adhesion; cell invasion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Staphylococcus aureus ribH polynucleotide and polypeptide useful in the treatment of gastric ulcers and gastritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and treat diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAH52104 to AAH53970 represent nucleic acids (I) encoding polypeptides (II) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the used in vaccination. The nucleic acids (I) may be used to produce the containing them which are used to produce hosts cells which express the polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to rate antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH5509 represent oligonucleotide sequences from the present invention. AAH55091 to the compounds that may be used to acide and primers which are used in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present for SEQ ID NO:4455 to 4464.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis -
                                                                                                                                                                                                                                        S. epidermidis open reading frame protein sequence SEQ ID NO:3164.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABPS124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

NB. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated nucleic acid encoding a Staphylococcus epidermidis polypeptide, useful for diagnosing and treating bacterial infections -
                                                                                                 Staphylococcus epidermidis ORF amino acid sequence SEQ ID NO:5103.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 71.7%; Score 33; DB 23; Length 157; 70.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel protein conjugate (I) comprising at least 1 functional region (FR) at any position in the sequence of a carrier protein (II) to form a capsid three-dimensional structure of the Unazine synthase (LS) type, such that the outer periphery is covalently linked to many FR. The invention also describes (I) a hetero-oligomeric of inked to many FR. The invention also describes (I) a hetero-oligomeric different (I) or of at least 1 (I) and at least 2 (I) that lacks FR, with the components optionally covalently linked by chemical treatment; and the components optionally covalently linked by chemical treatment; and (I) a method (for preparation of (I) and at least 1 (I) and at least 1 (I) but lacks FR, with the components optionally covalently linked by chemical treatment; and preparation of (I); (4) a DNA (III) that encodeds (I); (5) LS from Bacillus subtilis with Cys 93 and/or Cys139 replaced by Ser; (6) DNA (III) that encodeds (I); (5) LS from Bacillus subtilis with Cys 93 and/or Cys139 replaced by Ser; (6) DNA (III) that encodeds (I); (5) LS from Bacillus subtilis and a fellow and second of the second of s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                      To make a recombinant virus vector comprising human papillomavirus genes inserted into the vaccinia virus genome, neutral sites for insertion must be utilised such that replicative ability is not adversely affected. The neutral sites are identified by analysing the viral genome to identify ORFs which are likely to encode functional genes and selecting sites between such ORFs or within sequences for non-functional genes. The sequence shown is that transcribed form the vaccinia virus WR strain positions 23501-25000 contg. the regions covered by the four fragments Salf, G, H and I. The sequence was transcribed in all three reading frames to determine genuine vaccinia virus genes via codon usage, thus determining neutral sites. HPV DNA sequences may be inserted neutral sites, e.g. those encoding E6 or E7 of HPV 16 and 18 or mutants of these proteins. The recombinant virus vector may be used immunotherapeutically to see also AAR27723-43.

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip. inf, pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human, digestive system antigen, gene therapy, cancer, appendicitis,
ulcerative colitis, infection, Hirschsprung's disease, chronic colitis,
digestive system disorder, Meckel's diverticulum.
                                                                                                                                                                                                                                                               Novel 1405 isolated polypeptides, useful for diagnosis, treatment and prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

the proteins are collectively known as colon cancer antigens. The colon
cancer-associated nucleic acid molecules (N) and proteins (P), where
the proteins are collectively known as colon cancer antigens. The colon
cancer antigens have cytostatic activity and can be used in gene
therapy and vaccine production. N and P may be used in the prevention,
diagnosis and treatment of diseases associated with inappropriate P.
cxpression. For example, N and P may be used to treat disorders
associated with decreased expression by rectifying mutations or deletions
in a patient's genome that affect the activity of P by expressing
in a patient's genome that affect the patients own production of P.
Additionally, N may be used to produce the colon cancer-associated Ps,
by inserting the nucleic acids into a host cell and culturing the cell
c to express the proteins. N and P can be used in the prevention, diagnosis
and treatment of colorectal carcinomas and cancers. Add37196 to Add37204
and AAB77789 represent sequences used in the exemplification of the
                                                                                                                                                ö
number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colltis or ulcerative colitis. The present sequence is a digestive system antigen of

          or its gene transcript. Pharmaceutical compositions and gene therapy constructs comprising the mucin genes are used for treating disease conditions associated with aberrant Mucin expression, altered properties of mucus or epithelial inflammatory processes involving Mucins like Crohn's disease, ulcerative colitis, asthma, chronic bronchits and colorectal cancer, cystic fibrosis, inflammatory bowel disease and breast these diseases or their predisposition. The MUCII and MUCI2 polypeptides are used for preparing antagonist and antibodies. The present sequence represents the human MUCI2 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes colon tumour associated proteins (I) and the polynucleotides (II) that encode them. (I) have cytostatic activity. (I) and (II) can be used in gene therapy and vaccine production. (I) and (II) may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate colon tumour associated protein (TCAP) expression, such as colonic cancer. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of TCAPs by expressing inactive proteins or to supplement the
polymorphism, mutation, deletion, truncation and expansion in the gene

ö
patients own production of them. Additionally, (II) may be used to produce the TCAP proteins, by inserting the nucleic acids into a host cell culturing the cell to express the protein. (II) and its complementary sequences may also be used as DNA probes in diagnostic polymerase chain reaction (PCR) and hybridisation assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. (I) may also be used as antigens in the production of antibodies against TCAPs and in assays to identify modulators of TCAP expression and activity. Anti-(I) antibodies and antagonists may also be used to down regulate TCAP expression and activity. The anti-(I) antibodies may also be used as diagnostic agents for detecting the presence of TCAPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). AAI38460 to AAI29512 and AAM24521 represent nucleotide and amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes compounds (1) for the immunotherapy and diagnosis of colon cancer. Also described: (1) a method for detecting the presence of cancer in a patient; (2) a method for stimulating and/or expanding T cells specific for a tumour protein; (3) an isolated T cell population comprising T cells prepared by the method of (2); (4) a method for stimulating an immune response in a patient; (5) a method for treating cancer in a patient; and (6) a method for
                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polynucleotide, useful for the preparation of a composition for stimulating an immune response against, or treating, cancer
